

Lenovo XClarity Integrator

Introduction to LXCI

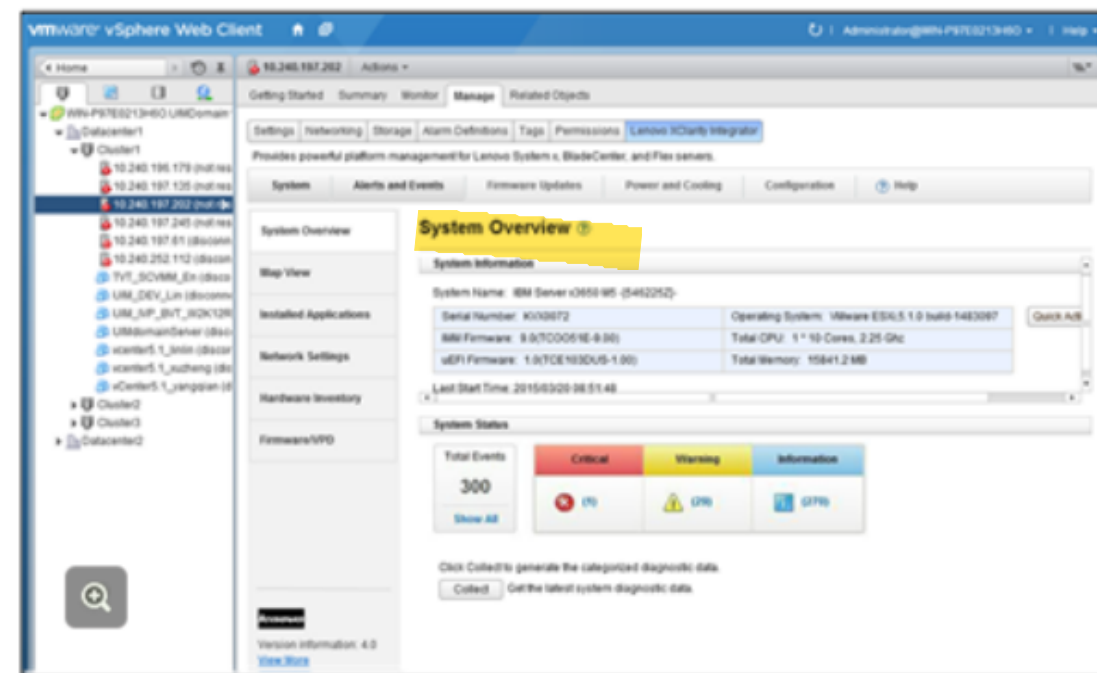

Lenovo

Lenovo XClarity Integrator overview

Lenovo XClarity Integrator (LXCI) is an add-on that can be installed to existing commercial virtual management tools to add Lenovo-specific management functions inside the application, reducing the time required for routine system administration tasks. LXCI provides the following key features:

- Extends Lenovo XClarity Administrator (LXCA) features to the virtualization management console
- Enables management of legacy System x as well as ThinkSystem infrastructure from the virtualization management console
- Reduces workload downtime by dynamically triggering workload migration in clustered environments during rolling server reboots or firmware update

To have access to all the features of LXCI, an LXCA Pro license is required.
