

Lenovo XClarity Orchestrator

Introduction to LXCO

Lenovo

Lenovo XClarity Orchestrator overview

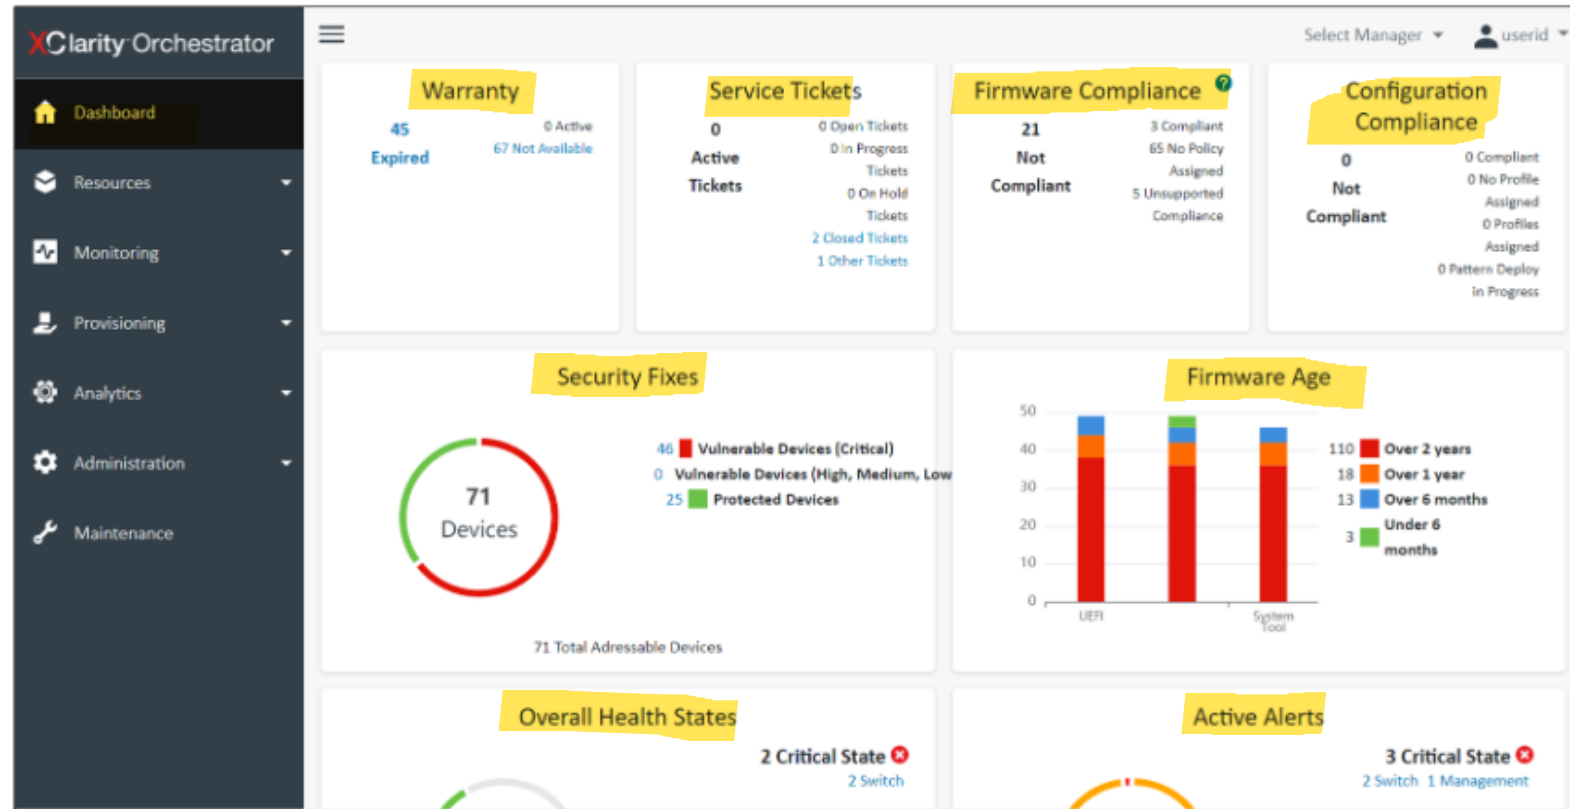

Lenovo XClarity Orchestrator (LXCO) provides centralized monitoring, management, provisioning, and analytics for environments with large numbers of devices. It leverages existing resource managers, such as LXCA, across multiple sites to check overall health information, collect device inventory and health summaries, drill down into device details, check event and audit logs, and apply updates to managed resources.

LXCO key features

LXCO features include:

- A display showing multiple LXCA groups and site overviews
- Inventory summary displays
- A display showing device health status summaries, including information about chassis, servers, switches, and storage
- Firmware compliance reports
- Configuration pattern compliance reports
- Service and Support: Call Home, service tickets management, and warranty
