

# Management software

ThinkSystem DE Series arrays management console

Lenovo

## Management software overview

All ThinkSystem DE Series storage arrays support the following ThinkSystem SAN OS software:

- ThinkSystem System Manager
  - A single storage system management. System Manager supports GUI only.
  - It is preinstalled on the controllers
- ThinkSystem SAN Manager
  - A host-installed GUI-based application for centralized management of multiple DE Series storage systems
  - It supports Windows or Linux host environments
- ThinkSystem Storage Manager
  - A host-installed GUI-based application, required to support the Secure CLI interface, multi-path drivers, and multi-system firmware updates
  - It supports Windows or Linux host environments

## Software updates in May 2020

The following software updates are included in DE Series storage arrays firmware version 11.60.2, released in May 2020:

- ThinkSystem System Manager
  - Users can now download the secure management CLI (SMcli) through System Manager
  - Synchronous and asynchronous mirroring settings have been removed from the System Manager → Storage page
- ThinkSystem SAN Manager
  - Users can now set up synchronous or asynchronous mirroring with SAN Manager (requires additional license keys)
- ThinkSystem Storage Manager
  - It is no longer bundled together with SMcli, and users will need to download SMcli with System Manager
  - In-band CLI is no longer supported

Click [HERE](#) to see a comparison of the DE Series 11.50.x and 11.60.2 management software. Go to the Management software section for more information.

# Management flow

# ThinkSystem System Manager

ThinkSystem System Manager (TSM) is the management console for a single DE storage system. TSM supports the web GUI. Users can monitor, configure, and perform troubleshooting actions on the storage through TSM.

## Access to SAN OS

The DE Series Storage Array's operating system is SAN OS. SAN OS supports both GUI and CLI mode:

- GUI mode (ThinkSystem System Manager)
  - Open a web browser and enter the System Manager IP address to log in to System Manager
  - It requires an Ethernet management port connection between the host and the storage array
- CLI mode (SMcli)
  - 11.50.3 or earlier versions:
    - Storage Manager must be installed to support the secure CLI interface
    - In-band CLI from 11.50.3 can be used to manage 11.50 and 11.60 controllers
    - In-band CLI cannot manage controllers running NVMe-oF protocols
  - 11.60.2 or later versions:
    - The out-of-band CLI interface is installed through the System Manager's System page → Add-on section
    - Runs in secure mode only
    - Requires an Ethernet management port connection

## ThinkSystem SAN Manager overview

ThinkSystem SAN manager is a web browser-based GUI console for multiple DE Series systems. ThinkSystem SAN Manager can be installed on a Windows- or Linux-based host system. Users can also open TSM for each managed DE storage array through SAN manager. Following the 11.60.2 updates, users must use SAN Manager to set up synchronous or asynchronous mirroring.

**Note:** The synchronous and asynchronous mirroring features require the premium feature key installed through ThinkSystem System Manager.

## Storage Manager overview

For the 11.50.x version, Lenovo Storage Manager is a host-installed GUI-based application required to support the System Manager Secure CLI interface (SMcli), multi-path drivers, and multi-system firmware upgrades. Storage Manager supports both Windows or Linux host environments.

Storage Manager is needed along with SAN Manager to fully manage multiple storage arrays. Some of the Storage Manager functions – for example, firmware upgrade – are not integrated into the SAN Manager.

After the 11.6.2 release, Storage Manager only supports the following functions:

- **SMAgent: Storage Manager Agent Package**
  - SMAgent contains the software that provides a connection from the host's Ethernet port through the Fibre Channel I/O path to one or more Storage arrays.
- **SMUtil: Storage Manager Utilities Package**
  - SMUtil contains utilities used to locate and register newly added volumes with the host's operating system.
- **Smruntime: Storage Manager Runtime Package**
  - Smruntime contains the core runtime environment shared by other Storage Manager packages

## ThinkSystem DE plugin for vCenter overview

The DE plugin for vCenter provides integrated management of DE Series storage arrays with a vSphere Client. Most of the options in the DE plugin for vCenter GUI are similar to those in the ThinkSystem SAN manager.

The plugin requires VMware vCenter Server Appliance to be deployed in the VMware environment and an application host to install and run the plugin web server.

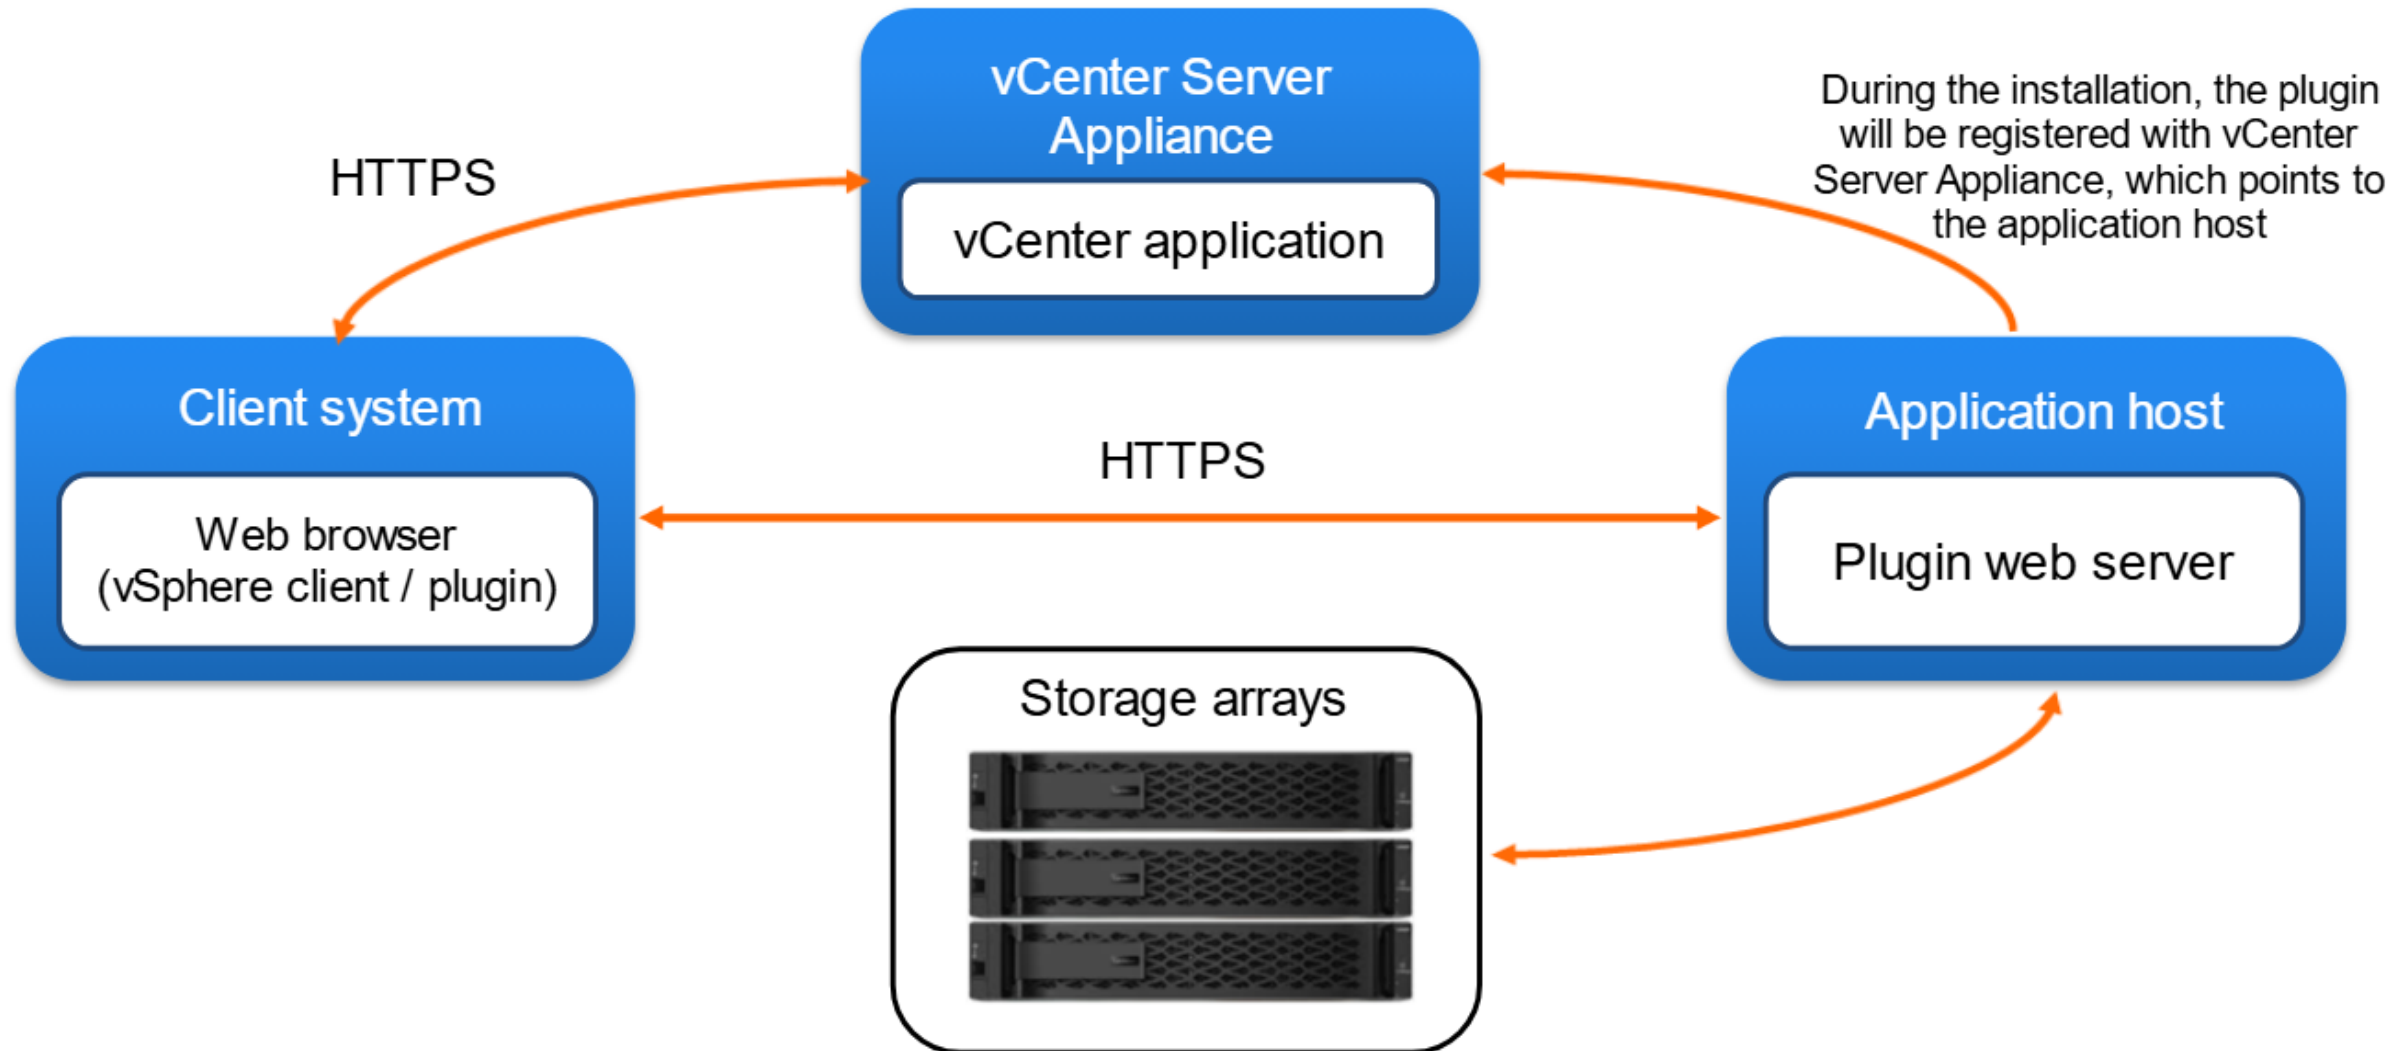

To install the DE plugin for vCenter, be sure that systems meet the following requirements:

- VMware vCenter Server Appliance supported versions: 6.7u3 or 7.0u1
- Controller firmware for Lenovo storage arrays: 11.60.2 or later
- Supported application host versions: Windows 2016 or Windows 2019
- Supported host protocols: iSCSI or FC

For more information about the DE plugin for vCenter, refer to the following documentation:

- ThinkSystem DE Plugin for vCenter: Installation and Configuration guide on [Lenovo Support](#)
- ThinkSystem DE Plugin online help on [ThinkSystem Storage Documentation](#)

# ThinkSystem DE plugin for vCenter communications

## XClarity Administrator

Users can access XClarity Administrator (LXCA) to manage DE Series storage and other ThinkSystem server products at the same time. Users can also use the Inventory page to monitor DE storage status.

The following DE storage features are not supported in LXCA:

- Centralized user management
- Server certificates and Encapsulation
- Configuration Patterns
- Operating-system deployment
- Firmware and software updates
- Remote control
- Graphical view of hardware
